ALASIA PRO

Eco soil loosener

The eco soil loosener **ALASIA PRO** is JYMPA's latest innovation in ground covers management.

The tungsten plates at the ends of the tines allow very narrow tines to ensure that the soil layers remain undisturbed and preserving the vegetal cover, soil moisture and temperature, whilst offering high resistance to abrasion and wear.

Its tines, which are adjustable in position and height, and the bracket for fitting counterweights, allow the machine to be tailored as closely as possible to the requirements of the vegetation cover.

“Adaptable to the needs of the ground cover”

Model	Required power HP	Security system	Width m	Working depth cm	Clearance cm	No. tines	Tines section mm	Hitch category	Approximate weight kg
