DONATI

Stone windrower

Like the HALLEY model, the **DONATI** stone windrower is an ideal machine to complement the work of the MYMERTIA or MYMESIA stone pickers.

It is a rake with mechanical tines, without moving parts, which is attached to the hydraulic arms and to the third point of the tractor, and as it advances it drags to one side the small stones of the surface of the land forming windrows spaced up to six metres apart. These stones are then collected in a few passes with a MYMERTIA or MYMESIA stone picker.

Optional elements:

- Lightning kit
- V20 reflective plate

“The perfect complement for small stones”

Model	Recommended power HP	Machine width m	Hitch category	Approximate weight kg
DONATI-3000	70-90	3.00	2	1,300
