

Stones

HALLEY

Stone windrower

For those who have a MYMERTIA or MYMESIA stone picker and have a lot of small stones in their fields, JYMPA has developed the **HALLEY** stone windrower.

This is a helical mill with 64 easily interchangeable tines which, driven by the tractor's power take-off, allows the small stones on the surface of the soil to be moved to one side, forming windrows spaced up to six metres apart. These stones are then collected in a few passes with a MYMERTIA or MYMESIA stone picker.

“The perfect complement for small stones”

Optional elements:

- Lightning kit
- V20 reflective plate

Model	Recommended power HP	Machine width m	Hitch category	Approximate weight kg
HALLEY-3000	50-90	3.00	2	780
